Art Unit 2508

The text of those sections of Title 35, U.S. Code, not included in this action can be found in a prior Office action.

Claims 23-38 are rejected under 35 U.S.C. § 103 as being unpatentable over Yamazaki, 5,262,654, and Zhang et al., 5,313,075, considered together.

Both of the patents teach concentrations of carbon, nitrogen, or oxygen as claimed. See, i.e., '654 column 6, lines 40-41, or '075 column 14, lines 60-61. Figure 15 of '075 shows the Raman shift, and both references appear to have intrinsic channel regions. Laser irradiation is taught at column 14, lines 9-16 of '075. It would have been obvious to form transistors having combinations of these features as claimed, in order to achieve the advantages associated with each feature as taught in the two references.

Claims 23-38 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-21 of U.S. Patent No. 5,313,075 or claims 1-14 of U.S. Patent No. 5,262,654, for the reasons noted above.

Applicant's arguments submitted have been considered, but these arguments are moot in view of the new grounds of rejection.
